▨ PROFILE

I am passionate about leveraging my diverse background to decipher challenging problems and create delightful user experiences. Being a diligent, hardworking and result oriented person, I always work towards achieving best result on each project I lay my hands on.

💼 PROFESSIONAL EXPERIENCE

Frontend Developer, *@TeaPayment*   06/2022 – present
                                                                                                      Lisbon, Portugal

I have contributed to the development of an investment platform (**ibanwallet.com**) utilizing React (Next.js) and Redux. My role in this high-traffic platform included adding new features (investment flows & user authentication), as well as rewriting legacy code and implementing Unit Tests utilizing Jest, and E2E tests with Cypress.

Alongside this platform, I participated in the development of a backoffice portal to manage the users, which was heavily integrated with the database developed by our backend team. Through my work on both projects, I gained experience consuming APIs to display and edit data.

Furthermore, I also took the lead on the creation of a landing page (**safebrok.com**) for other products introduced by the company. This website, while primarily static, was also powered by a CMS for its' blog section. I designed data models for the CMS' API, as well as consuming and displaying the information on the website. To deliver the project, I also created an automated CI/CD pipeline using Github Actions and AWS.

Senior Treatment Coordinator, *@Straight Teeth Direct*   06/2020 – 05/2022
                                                                                                      Lisbon, Portugal
- First point of contact for the platform's user.
- Triage technical issues within the application to the respective Product Owner.
- Assist with training and integration of new team members.

🧠 SKILLS

Technologies	Frameworks & Libraries
HTML & CSS	React (Next.js & Gatsby.js)
JavaScript & TypeScript	Zustand, Redux (& Redux Toolkit)
AWS (CI/CD)	Bootstrap, TailwindCSS & SASS/SCSS
REST / GraphQL APIs	Jest & Cypress (E2E & Unit Testing)
